

JavaScript DOM Manipulation & Event Listeners Masterclass

Subject: JavaScript Core & Algorithms

=====

STUDYVAULT VERIFIED ACADEMIC NOTES & STUDY GUIDE

=====

1. DOCUMENT OBJECT MODEL DOM SELECTION

Use `document.querySelector` and `document.querySelectorAll` for modern DOM querying.

2. EVENT LISTENERS & EVENT DELEGATION

- `element.addEventListener("click", e => { e.preventDefault; });`
- Event delegation attaches a single listener on parent containers to manage child events.
- Use `e.stopPropagation` to prevent event bubbling up the DOM tree.

3. ASYNCHRONOUS DOM UPDATES

Update `innerText` or `textContent` instead of `innerHTML` to prevent XSS vulnerabilities.
